Dear Friends,

May, 2019

Are we about to enter a new Bull Market in precious metals? The sneaky banisters, along with JP Morgan have done some pretty fine price manipulation for the past decade. They have, for the most part, gotten away with it too. Bart Chilton passed away suddenly last month of pancreatic cancer. Bart was the former commissioner of the CFTC. He played no small part in exposing the manipulation re: JP Morgan's manipulation of silver and gold. Few of his peers in the CFTC show the courage to stand up to and deal with the reprehensible and blatant manipulation which continues while the investigation is in progress. Chilton realized that since taking over Bear Stearns in 2008, JP Morgan had been manipulating the price of precious metals, especially Gold and Silver.

John Edmonds, a former JP Morgan Chase precious metals trader, pleaded guilty October 9, 2018 to manipulating the prices of Gold, Silver, Platinum and Palladium futures contracts between 2009 and 2015. He was schooled on illegal trading practices from some senior traders. He used those tactics and his supervisors knew about it and let him do it! Edmonds sentencing has been postponed twice.

There exists a small group of powerful people who hold a disproportionate amount of wealth, privilege, political power, or skill in the financial society. These elites have been advising you to dump your gold and silver while they themselves are enjoying the opportunity they have created to dump their stocks at highs and buy your precious metals at absurdly low prices.

The Central Bank of China has been stocking up on Gold hand over fist for the past 5 months. And reports its gold reserves rose 61.1 million ounces just last month!

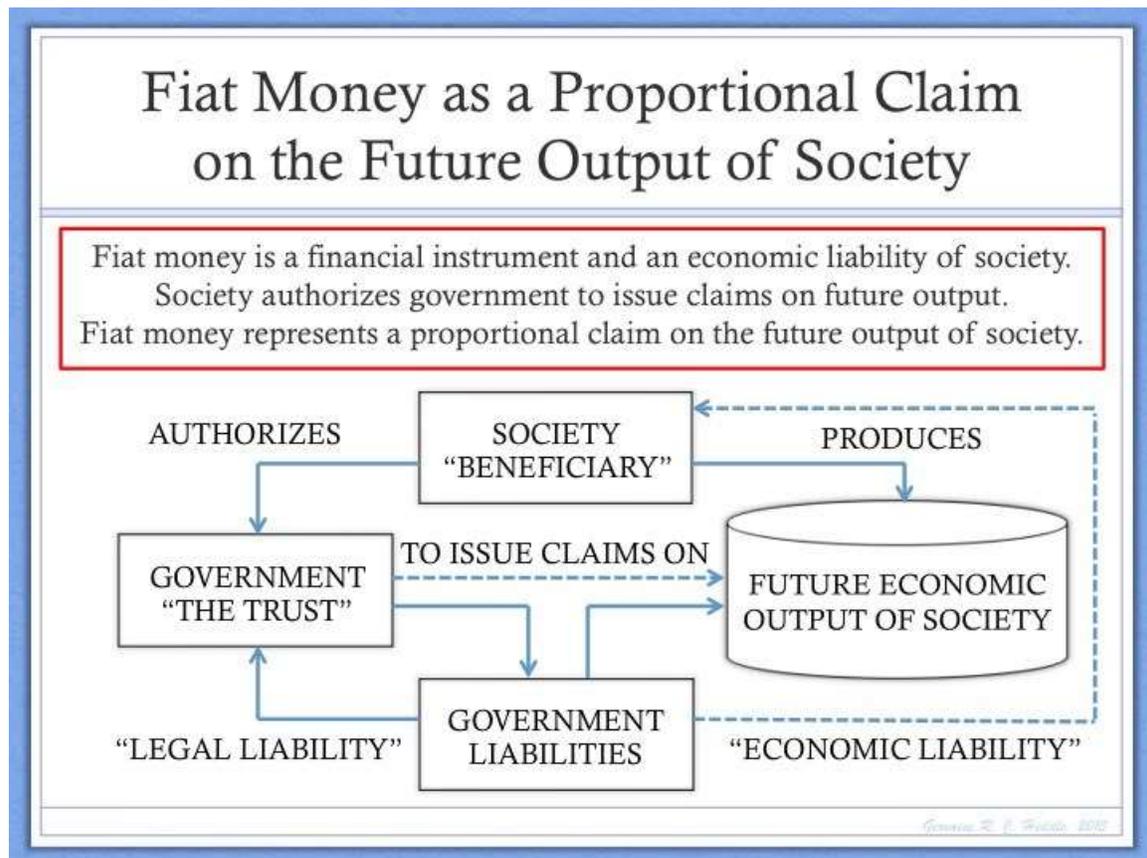

When Nixon took us off the Gold Standard on August 15, 1971, our currency transformed from a gold backed dollar to a fiat (credit driven) dollar.

"How Fiat Money Works: Fiat money only has value because the government maintains that value, or because two parties in a transaction agree on its value.

Historically, governments would mint coins out of a valuable physical commodity, such as gold or silver, or print paper money that could be redeemed for a set amount of a physical commodity. Fiat money is inconvertible and cannot be redeemed.

The mortgage crisis of 2007 and subsequent financial meltdown, however, tempered the belief that central banks could necessarily prevent depressions or serious recessions by regulating the money supply. A currency tied to gold, for example, is generally more stable than fiat money because of the limited supply of gold. There are more opportunities for the creation of bubbles with a fiat money due to its unlimited supply.

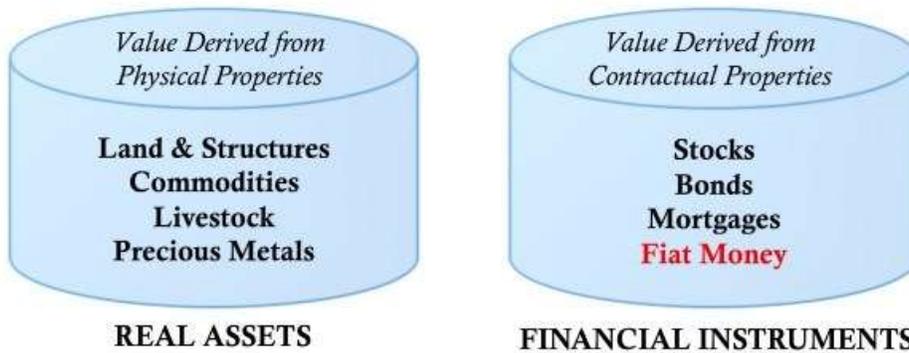

The African nation of Zimbabwe provided an example of the worst-case scenario in the early 2000s. In response to serious economic problems, the country's central bank began to print money at a staggering pace. That resulted in hyperinflation, which ran between 230 and 500 billion percent in 2008. Prices rose rapidly and consumers were forced to carry bags of money just to purchase basic staples. At the height of the crisis, 1 trillion Zimbabwean Dollars were worth about 40 cents in U.S. currency. (Investopedia)

Every Asset Falls Into One of Two Buckets

Every asset is either a real asset or a financial instrument. Real assets derive their value from their *physical* properties. Financial instruments derive their value from their *contractual* properties. A financial instrument is an asset to one party because it is a liability to another. Fiat money is a financial instrument: it derives its value from an implied-in-fact contract.

Recommendations:

**GOLD ~ CATEGORY ONE
INSURANCE**

World financial and economic turmoil is a reality. Physical precious metals are a shelter in a financial storm. We believe everyone needs to have **at least** 10-20% of their assets in Hard Money/ Precious Metals. For more than 5000 years Gold is the only money that has had been universally accepted. Fiat currencies are created by governments can go be bankrupted or default. Gold has always been real money, has real value. Precious metals can be bought and held in your trust or Precious Metals

IRA. It is easy to transport or liquidate. When you own physical Gold, you own a private store of wealth. No one knows if, how much or where you have it. It can be an excellent way to privately pass on your wealth to your children too. What stock, or fiat, paper money can say that?

The most popular bullion coins are the United States 1oz, 1/2oz/1/4oz and 1/10oz Gold Eagle coins. While there is a vast menu of coins to choose from, the next most sought after bullion coins are the Austrian Philharmonic, Canadian Maple Leaf , South African Krugerrand , and Australian Kangaroo. Gold bars also are a good choice for low premium gold ownership. If you have an IRA, it could be a very good idea to keep part of it in a Precious Metals IRA account as well. Ask us to help.

The fore mentioned coins are available in rolls or single pieces or any amount. Even if you are just a small investor or have never entered the metals market before You CAN be a gold owner now!

GOLD~ CATEGORY TWO INSURANCE WITH A KICKER

Pre-1933 U.S. minted Gold Coins are the coins we recommend as a step up to fill in your insurance category. They are close to the modern bullion coins in affordability while offering the fun of collecting some of America's most historical and beautiful treasures. These raw/ uncertified gold coins have been slightly circulated, have probably ridden on a stage coach or traveled in a cowboy's pocket or sat in the back of a bank vault for a while, but are still in Extra Fine condition. If only they could speak, what a story they could tell! Because they are no longer minted, the supply is fixed and can only grow smaller as time passes making them a candidate for more profitable prospects than the modern bullion coins which rely on the spot prices rising for the only primary growth. We remind you, **bullion coins are important**

for wealth preservation and protection. This category of pre 1933 U.S. Gold is one step up. We really love the old U.S. slightly circulated gold coins right now, Especially the XF \$20 Liberty Gold coins. These beauties normally have a higher premium because they are over 100 years old and contain nearly 1 full ounce of gold. We have some available at prices *very* close to the modern bullion Gold Eagle at this time! If you want to fill in your portfolio with “private bullion” this is the category for you! 800-494-4149.

Gold coins are the very best of gifts ! Wedding gifts of gold are traditional for many people.

GOLD~CATEGORY THREE Investment Grade U.S. Gold Coins

Numismatic coins are essentially rare or valuable coins that have an external value above and beyond the base value of the precious metal. Rare date, high grade coins are for the true collector who is not afraid to speculate, not the common metals portfolio investor . Resource Consultants, Inc. only recommends U.S. Gold coins that are third party graded by PCGS or NGC.

Our most successful clients have found that like most investments, it is important to have a portfolio that is both balanced and diversified. We feel that the common date Pre-1933 U.S. Gold coins offer an opportunity for juicy gains over and above the increases in spot prices. Those you who are “Not a Rare Coin Collector” could be happily surprised that you can still find some very affordable third party graded common date gold in this category ! Resource Consultants, Inc. recommends a portion of most metals portfolios to hold some coins in this category. The secret is to buy right! We have some of the best numismatic prices found anywhere! Call Resource Consultants, Inc. 800-494-4149 for help building a portfolio that you can be comfortable with because it fits your intentions , budget and goals!

Whether you want to just get some of these in lower to middle grades and common dates, or are looking to start or add to a collection, please give us a call you could be very happily surprised!

SILVER ~CATEGORY ONE INSURANCE

Silver Eagle coins were first released on November 24, 1986. It is the official silver bullion coin of the United States. The U.S. mint and some other countries have continued to mint one ounce silver coins each year. They are usually sold in rolls of 20 or 25 or monster “Mint Boxes” of 500 ounces. Silver, because it is less expensive than Gold is easier for even the smallest investor to get off the benches. At today’s prices, it would be a shame to not be grabbing up as much of this white metal as possible!

Don’t forget your graduates! Now is the time to get the youth started on the financial path of something that is good, real and tangible! We recommend getting coins to commemorate special years. How many graduates do you have this year?

Many of higher net worth investors are actually getting a little bored with the stock markets and are beginning to turn once again to the more satisfying and fun ownership of tangibles for a good portion of their portfolios. Gold is still a favorite safe haven against economic chaos.

As we conclude the writing of this letter, the U.S. – China trade talks continue on with a pawing of dust and clashing of horns in stalemate. While stock futures continued to show deeper losses, gold futures overcame the early losses. We feel that the metals markets will continue to build up steam throughout the summer and could bring about some great gains going into the fourth quarter.

Thank you and God Bless...
Linda Gorman and the RCI family
